

Perceptics License Plate Reader and Under Vehicle Inspection Systems Receive European CE Certification

Perceptics Expansion Efforts Address European Union and Middle East Channel Partner Requirements

KNOXVILLE, Tenn., March 24, 2010 -- On March 16, 2010, [Perceptics](#), LLC met CE certification requirements and received proper Declaration of Conformity documents for the company's [License Plate Reader \(LPR\)](#) and [Under Vehicle Inspection Systems \(UVIS\)](#). The CE mark is a mandatory marking on most products intended for sale within the 27-countries of the European Union, indicating that the manufacturer or importer to the European Economic Area (EEA) has respected the requirements under the EC directive for safety, health and the environment. The EEA consists of the Member States of the European Union and a number of discretionary members of the European Free Trade Association.

[Perceptics](#) worked with Global Testing Laboratories (GTL), an accredited testing lab in Knoxville, Tennessee to perform system and component evaluations on the [License Plate Reader](#) and [Under Vehicle Inspection System](#). GTL evaluated product designs and the manufacturing processes before executing a series of Electromagnetic Compatibility and Electrical Safety tests required for CE certification.

“Receiving the CE certification mark and holding proper Declaration of Conformity documents not only serves the needs of our European re-seller channel partners,” says Perceptics’ vice-president of product engineering, Kevin Giles, “but meets the stringent shipping requirements to our strategic channel partners and agencies in the Middle East.”

All [License Plate Readers](#) and [Under Vehicle Inspection Systems](#) products manufactured after March 16, 2010, will bear the proper CE mark. Declaration of Conformity documents for the [License Plate Reader](#) and [Under Vehicle Inspection System](#) products are on file at Perceptics’ Knoxville, Tennessee facility.

[Perceptics License Plate Readers](#), Driver Imaging Systems and [Under Vehicle Inspection Systems](#) have been deployed in more than 1,000 vehicle lanes worldwide, including the United States, Canada, Abu Dhabi, United Arab Emirates and Singapore and Saudi Arabia.
