Advanced vehicle-inspection technology from Perceptics boosts Orange County, Fla., Corrections Department ability to deter contraband and other prohibited activities

Inspection capability far greater than at most local, state, and federal correctional facilities

Advanced new vehicle-inspection technology has increased the ability of the Orange County, Fla., Corrections Department to detect and deter the introduction of contraband into its 81-acre secured compound as well as to detect efforts to exit the facility with any unauthorized property or people.

The Corrections Department partnered with Perceptics, LLC, to incorporate a very high technology-based vehicle inspection solution that far surpasses the inspection capability used in the past, including what is currently being used in most other correctional facilities around the nation, even surpassing the capabilities of the federal prison system. “We are very excited to have this level of inspection technology in the Orange County Jail and appreciate the support of the Orange County Board of Commissioners in helping us achieve the goal of being on the cutting-edge of technology,” said Kim Lanham, project manager of construction at the Orange County Jail. “This and other technologies afforded us in the construction of our new facility reflect the deep commitment to law and order our County Commission has for the citizens of Orange County.”

The new technology from Perceptics, which is based in Knoxville, Tenn., uses a very high-resolution image of the undercarriage of a vehicle to be compared side-by-side either with a previous image taken of the same vehicle or of a like vehicle. Any alterations can be detected and examined more closely. All vehicle images are stored in a database for further inspection and can be shared with other law enforcement agencies via email.

“This technology offers us the opportunity to liaison more effectively with related agencies, as well as with other correctional facilities in Florida,” Lanham said.

About Perceptics

Perceptics, LLC, the world’s leading National Border Security and Traffic Management company, offers customers innovative and customized imaging technology solutions from a single source. With an excellent track record of proven performance in these most demanding applications and industries for 28 years, Perceptics leads the industry in providing port, border, container, and transportation lane security solutions to a variety of commercial, federal, and government agencies. Approximately 1,000 national border LPR lanes are in operation at sites throughout the world, including in the United States along the borders with Canada and Mexico, as well as at military bases, private factories and other facilities, special events, airports, embassies, government buildings, law enforcement facilities, and by law enforcement officers in the field. Perceptics also offers an Under Vehicle Inspection System, which complements the LPR system with a safe, rapid, and thorough method of examining the undercarriages of vehicles. Perceptics is committed to continued research and development providing systems with high levels of accuracy and durability while maintaining the flexibility to incorporate new features and enhancements. Along with system technologies, Perceptics also provides project management, technical expertise and customer-service programs aimed at exceeding the customer’s expectations.
