

PERCEPTICS LAUNCHES MOBILE UNDER VEHICLE INSPECTION SYSTEM

KNOXVILLE, Tenn., May 14, 2009 - Perceptics LLC, the nation's leading national border security and traffic management company, has released a new rugged, mobile version of its Under Vehicle Inspection System.

Perceptics will launch its new Mobile UVIS Imaging System at the FPED VII Force Protection Equipment Demonstration show in Stafford, Va., May 19-21. FPED is held every two years to provide leaders and decision-makers from the Defense Department and other federal departments and agencies, and selected state and local law enforcement and corrections agencies, the opportunity to observe and become familiar with commercially available equipment for physical security/force protection.

"The Perceptics UVIS mobile unit is ideal for facility access control, secondary or overflow inspection lanes, or where installation of an in-ground UVIS system is not feasible," said Perceptics President John Dalton.

The system provides a safe, rapid, and thorough method of examining the undercarriage of passenger and commercial vehicles in order to detect devices or modifications of the vehicle undercarriage.

Like the Perceptics in-ground UVIS, the mobile system consists of a high-resolution color line-scan camera in a folded optical design, and uses super bright LED illumination, providing the most detailed color image in the industry. Once the vehicle completely clears the scanning device, a 4K true-color digital image of the undercarriage is sent to the database and can be viewed by the operator.

Key features of the Perceptics Mobile UVIS Imaging System include:

- Extended mobile vehicle ramps and steel frame construction accommodate small passenger cars with low undercarriage clearance and commercial trucks;
- 4K resolution line-scan camera provides a true-color, seamless image of vehicle's undercarriage;
- Rugged construction design to withstand harsh operating environments such as that found in the Middle East;
- It is designed for bi-directional vehicle traffic utilization at military bases and critical government facilities.

About Perceptics

Perceptics, LLC, the world's leading National Border Security and Traffic Management company, offers customers innovative imaging technology solutions for mission critical

security and revenue protection applications. With a proven performance record in these most demanding applications for 29 years, Perceptics has more than 1,000 national border LPR lanes in continuous operation at sites throughout the world, including in the United States along the borders with Canada and Mexico, as well as at military bases, private factories, airports, embassies and government buildings. Along with system technologies, Perceptics also provides project management, technical expertise and customer-service programs aimed at exceeding the customer's expectations.
