Perceptics and Crystal Clear Technologies
Announce Channel Partner Agreement.
Partner Agreement Provides Perceptics with Greater DOD Visibility.

Knoxville, TN: With a focus on meeting the rigorous security requirements of the Department of Defense to protect military installations, assets and people at home and abroad, Perceptics announced a new channel partner agreement with Crystal Clear Technologies (CCT). Based in St. Petersburg, FL., Crystal Clear Technologies specializes in IT network infrastructures and security, data center solutions, security systems and equipment, and biomedical supplies for the Department of Defense.

Perceptics' high performance License Plate Recognition and Under Vehicle Inspection systems products are currently installed at a multitude of military bases. These vehicle identification and inspection systems are utilized in support of security and threat screening initiatives at an access point or gate. The integrated system is designed to capture and integrate license plate data and vehicle undercarriage images into a single vehicle record. Used in concert with CCT's security solutions, gate officers can identify, inspect and report on vehicle's entering a particular gate, along with determining when a vehicle exits the installation.   With this level of technology and the intelligence it provides, security personnel can more effectively and efficiently respond with greater confidence levels to potential threats and security mandates.

VP of Sales and Marketing, Paul Bazzano recognized the importance of integrating multiple data systems, commenting, "Combining our products and solutions, Crystal Clear Technologies will be able to expand their current system offerings to the DOD and other federal facilities to include total vehicle intelligence and tracking capabilities". "Another area where Perceptics will benefit from CCT's business model is in the area of procurement services", Bazzano continued. "While we intend on driving demand and awareness, CCT will provide greater value to their customers at the highest levels in the DOD by leveraging Perceptics' integrated License Plate Recognition and Under Vehicle Inspection System."

John Lescarbeau, COO and Vice President of Business Development at CCT comments, "Vehicle identification and tracking data is essential to the DOD and we are excited to be able to broaden our solutions and offerings to include the initial element of identification."

About Perceptics:
For over 30-years, Perceptics License Plate Readers have been accurately reading plates and state identification on all plate types, any time, day or night. Their LPR, DOT Number Readers and Under Vehicle Inspection systems have been deployed in thousands of lanes worldwide, including the United States, Canada, Mexico, United Arab Emirates, Saudi Arabia, Malaysia, and Singapore.

About Crystal Clear Technologies:

Founded in 2002, [Crystal Clear Technologies](#) is a woman-owned small business, designed to support the mission critical requirements of the Department of Defense and the Federal government. Crystal Clear Technologies specializes in designing and implementing turn-key security and IT solutions for Federal, State and local government clients.

Crystal Clear Technologies offers extensive knowledge in procurement policies and are known for providing clients with strategic advice on all aspects of the government contracting process.
